Gas Air Tests
“No-Heat Situation”

If the mechanical inspector cannot get to a job site or the contractor was not ready when the inspections was made, and the inspector cannot get back for a no-heat situation, the mechanical inspector may request an Avista Utilities gas serviceman to witness the air test and unlock the gas meter. The Avista Utilities gas service person shall leave an inspection slip noting that they witnessed the air test.

This is for wintertime, no heat or not hot water problems. A gas log does not constitute a no-heat problem. The mechanical inspector must call the Avista Utilities gas dispatcher, 1-800-228-9187, and request the service.

This is not to be used to reduce the work load, but can be used in an emergency no-heat situation.
